

CLINIC CONSULTATION NOTE
Fenwick Road Respiratory Clinic

Patient: Ravi Shah
Date of birth: 1988-11-02
Clinic number: FR-40218
Date seen: 2026-02-19
Seen by: Dr Imogen Feltz, Consultant Respiratory Physician

PRESENTING COMPLAINT

Six-month history of nocturnal cough and chest tightness, worse in cold weather and after exercise. Two courses of oral steroids in the past year.

EXAMINATION

Chest clear on auscultation. No wheeze at rest. Peak flow 410 L/min against a predicted 520 L/min.

INVESTIGATIONS

Spirometry shows FEV1 2.9 L (72% predicted) with 14% reversibility following salbutamol. FeNO 46 ppb.

ASSESSMENT

Mild persistent asthma, currently poorly controlled.

PLAN

1. Start beclometasone 200 micrograms twice daily via inhaler.
2. Continue salbutamol 100 micrograms as required.
3. Inhaler technique reviewed with the respiratory nurse today.
4. Review in eight weeks with repeat spirometry.
